CUSTOM OPTIONS CATALOG

Pacific Yurts, the original designer and manufacturer of modern lattice wall yurts, has been constructing and selling yurts since 1978. We are proud of our customers' trust and loyalty, earned through our commitment to the highest quality craftsmanship and materials, on-time delivery, and customer service.

For four decades we have built yurts as our sole product line. Our long-term success as the leading manufacturer in the industry is owed in part to our ability to continue to innovate, to improve our product and add to the array of available options. For all our expertise, perhaps our greatest skill is the ability to listen to our customers and to continually enhance our yurts in response to their needs. Our experience and the proven performance of the award winning Pacific Yurt assure you of an exceptionally high level of customer satisfaction. Simply put...

No One Knows Yurts Like Pacific Yurts.

Our tradition of innovation is continued with the options included in this Custom Options Catalog. Each element within this catalog was designed and developed exclusively by Pacific Yurts to assist you in creating your own space.

"If the rest of the world conducted their business like you do, the world would be a far better place. I have done business with many companies in my days and yours sits at the top like a shining star."
 Sheri R., Arizona

As you walk between our display models and manufacturing facility, you'll cross a small stream meandering through a carefully preserved grove of 100 year old oak trees. We have "naturescaped" around our production shop and office and installed bird boxes from the Oregon Department of Fish and Wildlife. We invite you to visit.

If you are already the proud owner of a Pacific Yurt, you can add many of our options to your yurt. Some options are available only with the purchase of a new yurt.

WALL OPTIONS

Side Cover

Our Side Cover, made of high quality 100% woven polyester fabric, provides exceptional strength, durability and low maintenance. Optional Vinyl Side Cover is also available. Proven performance of both fabrics assures you of long lasting value. There are many colors to choose from such as Navy, Olive and Terra Cotta. Fabric swatches are available.

Additional Windows

Windows can be located around the perimeter of the yurt, to take advantage of a view and coordinate with your interior layout. They also furnish additional light and ventilation, adding to the spacious open feeling of the yurt. Fabric windows are clear vinyl, framed in marine quality Velcro and include zippered weather flaps and sewn-in screens, which means mosquitoes stay out.

Window Awning Frame

Consists of an adjustable anodized aluminum framework to support the window flap. This creates an overhang allowing the windows to be left open for ventilation.

Custom Curve® Glass Window System

Our glass window system is truly unique. It features an openable, efficient low-E thermal glass window mounted to a structurally engineered curved frame to match the circular shape of the yurt. This innovative design avoids the "flat panel" look, and our exclusive fabric flange assures a

weather tight seal. Order with a new yurt or retrofit to your existing Pacific Yurt. Customize with your own finishing touches such as shelving, blinds or curtains. Includes trim kit in Bronze, White or Tan and removable bug screen. Available on 16', 20', 24' and 30' yurts.

Stove Flashing

Double metal flashing allows the stovepipe to exit through the Side Cover. Made from galvanized sheet metal and coated for corrosion resistance and beauty. Standard opening is 8" with other sizes available.

INSULATION OPTIONS

Insulated Window Covers

These will insulate your windows during the coldest times of the year and are easy to attach and remove. Made of reflective insulation with a fabric liner facing to match the interior insulation of your roof and walls. Consider insulating some windows while leaving others uncovered for light and view.

Insulation Liners

If it's good enough for astronauts in space, you'd better believe it will help keep you warm here on Earth. Our seven-layer reflective insulation was developed by NASA. We cover it with an ivory colored fabric for an attractive interior finish. It works by reflecting radiant heat in both directions, keeping the yurt warmer in the winter and cooler in the summer. It is custom designed to match your window and door placement.

DOOR OPTIONS

Window Door

Beautiful solid wood door with window and inset wood panel comes pre-hung in a frame that is laminated for extra strength and includes weather stripping. Solid brass hinges, top quality lockset and aluminum threshold provide long term durability.

Panel Door

It has all the strength and beauty of our window door, but features inset wood panels in the top and bottom instead. Because sometimes you'll want to keep others out and have the whole place to yourself.

French Doors

Handcrafted right here in our shop, our French doors are truly elegant with inset wood panels at the bottom and windows above. They enhance the yurt with a wider access and additional view. They're available for the 16' yurt and larger models.

Fiberglass Door

This insulated architectural fiberglass door has a high quality ultra-durable finish, and is ideal for low-maintenance requirements in the harshest environments. Available in Window door and French door styles.

Additional Door

Add a back or side entrance for easy access to decks, hot tubs, gardens or additional views. Available on 16' and larger yurts. Ask about placement options.

Screen Door

Beautiful vertical grain Douglas fir screen door includes self-closing hinges and heavyweight screen. Provides extra ventilation while keeping the bugs out.

Upgrade Hardware for Screen Door

This option upgrades the standard spring-loaded steel screen door hinges to solid brass hinges and handle. Also included is a pneumatic door closer.

Door Screen Curtain

Open your door and let in the fresh air, but not the bugs! The overlapping split curtain attaches to the top of the door frame and is weighted at the bottom. Keep insects outside where they belong!

ROOF OPTIONS

Top Cover

Our flame retardant vinyl Top Cover provides excellent durability, low maintenance and protection against the elements. This extended life structural fabric is ideally suited for extremely wet climates or where snow loads are encountered. Overhead seams are electronically bonded together instead of being machine sewn and are impervious to moisture. Available in Putty or Olive color. A rain diverter is included over every door.

Door Awning

Versatile 5' x 6' piece of roofing fabric welded over the door. Add your own wood or metal support framework and the awning becomes a covered porch for outdoor enjoyment, shelter from the weather and protection for your door. Other sizes available.

Solar Arc

This durable, translucent vinyl roofing fabric allows diffused light to bathe the interior of your yurt. It takes advantage of natural lighting and is perfect for artists' studios and remote locations without electricity. Recommended for moderate climates. Not available with Premium Top Cover.

Premium Top Cover

Made of the highest quality roofing fabric available. It carries a 15-year material manufacturer's warranty. This is the same roofing material used on many new commercial buildings. Available in Tan, White, Gray or Dark Gray.

Water Catchment

Designed for conserving rainwater, this fabric gutter collects run-off from the roof, funneling it through downspouts into a storage tank or cistern which you supply. Available on new Top Cover only. For non-potable water use.

"I am pleased to see that your yurts are continuing to evolve with new options like porch awnings and water catchments. As I head into my fourth Colorado winter in my yurt, I'm still in awe of the beauty and functionality of my home." Brett L., Colorado

Perimeter Gutter System

Collects water run-off from the roof and prevents it from running down the wall. This will keep the Side Cover cleaner, reducing maintenance. Similar function to Water Catchment but utilizes rigid PVC and can be retrofit. Not recommended for high snow areas.

Banner System

Allows commercial enterprises to display custom graphics or logos on the yurt or to identify sponsors for special events. The removable banner fastens into a grommeted frame mounted on the roof.

“I enjoy the Pacific Yurt very much with my friends and family. It is a sacred space that I really cherish. Thanks for making it possible.”

Missy G., World Cup Downhill Mountain Bike Champion, Colorado

“Nike used a Pacific Yurt to create an on-site presence for World Cup Mountain Bike Races and for the Summer and Winter X Games. It offered shelter to our athletes and staff in the pouring rain, blazing sun and freezing mountain conditions. The Nike yurt was easily recognizable and well received by our consumers and athletes. It was a sweet setup!”

Margie W., Nike Outdoor Sports Marketing, Oregon

Door Canopy

Gracefully protects your entryway from rain. Made of top quality vinyl fabric on a welded aluminum frame. To personalize your yurt, add custom graphics, your logo or name to the front, along with a backlight system with translucent fabric.

SNOW AND WIND OPTIONS

Snow and Wind Kit

Specifically engineered for heavy snow and high wind conditions. Consists of high quality, kiln-dried supports secured by our custom hardware and a

cable blocking system to add rigidity to the roof. Stainless Steel Hardware upgrade available for harsh marine environments.

Perimeter Blocking

Pre-finished 2x4's install between vertical supports to meet IBC standards. Includes screws. Available only with Snow and Wind Kit.

Cable Tie-Down

Provides that additional level of protection in high winds by securing the center ring to the floor. Easily installed and removed as needed. Available only with Snow and Wind Kit.

2x6 Rafter/Ring/Hardware Upgrade

Upgrades the standard rafters, center ring and hardware for increased snow load capacity. Available on 20', 24' and 30' yurts with Snow and Wind Kit.

Central Column

Powder coated steel column support increases snow load capacity. Ideal for larger yurts in high snow conditions, such as at ski resorts, or where engineered high snow load capacity is required. Available on 20', 24' and 30' yurts with Snow and Wind Kit and 2x6 Rafter Upgrade.

Alpine Package

Includes upgrades to the center ring, rafters, door header, hardware and steel central column. Our strongest engineered package. Available only on the 30' model with Snow and Wind Kit.

"Pacific Yurts work great for us here at Sundance. We recently had two winters of the heaviest snow and wind I can remember and the yurts' performance was bulletproof. Our guests are blown away by the aesthetics and comfort of our yurts." Sam P., Sundance Resort, Utah

DOME AND RING OPTIONS

Dome Opener

Specialized hardware, mechanism and extension handle allows the dome to be opened. Opening the dome skylight allows the escape of hot air that may get trapped at the ceiling. Creates a natural convection cooling system for refreshing comfort.

Tinted Dome

Highly recommended for those who live in the tropics or have a site in a hot location with direct sun. The Tinted Dome blocks approximately 60% of the heat that comes through the skylight, and only marginally affects the natural light.

Center Ring Insert

Our finely crafted wood frame fits into the center ring and comes with your choice of optional bug screen or shade screen. The bug screen provides a barrier against

insects, and the shade screen reduces heat gain while stopping bugs. Designed for easy removal.

Dome Screen

Elegantly simple circular hemmed screen attaches to underside of the center ring. Choose bug or shade screen.

Fan Support

This beautiful sculpted wood support allows you to use a ceiling fan in the center of your yurt to keep things cool. Additionally, most fans can be reversed to aid heat circulation during the cold months.

Tropical Cupola

Designed for hot tropical environments, this powder-coated steel frame has an architectural fabric cover and replaces the dome skylight. The cupola is raised 6" around the perimeter, provides shade and

creates a natural cooling system by allowing maximum air flow for refreshing comfort.
